(54) Title: MODULAR MICROFLUIDIC SYSTEM

(57) Abstract: A modular microfluidic system is described having at least one base board with a plurality of fluidly linked fluid supply apertures, optional intermediate level boards of equivalent construction, a plurality of microfluidic modules adapted to be detachably attached to the base board/ intermediate boards, each having one or more fluid inlets and/or outlets, and a plurality of fluid couplings preferably in the form of projecting ferrules to effect releasable fluid connection between a module and a base board/ intermediate level board via a supply aperture on the board and an inlet/outlet on the module. A method of providing a microfluidic system as a modular assembly is also described.
